

ABRASIVE BLASTING Module

Experience Abrasive Blasting in Virtual Reality!

SimSpray Industrial's new **Abrasive Blasting** module allows students to practice in a three dimensional simulated environment, educating students on proper techniques to prepare industrial parts for coatings.

Blasting in virtual reality:

- Decreases expenses by reducing the need for materials
- Creates a safe, contaminant free work environment
- Increases practice time

Real-time feedback using a visual cue for distance assists with technique.

Review student work. Coverage map shows where the part has been cleaned, what contaminants are left, and substrate damage.

Objective scoring gives feedback on:

- Blasting media used
- Recyclability of media
- Blast rate and damage rate
